

## SPICES MARKET INSIDER

# Market News Service

## Spices

Building awareness and assisting developing countries with access to trade and market information has been at the heart of the International Trade Centre (ITC) work. The Market Insider is a newly branded global public goods service built on a "blog" interface to provide just-in-time content on market prices and industry developments focusing on forward-looking intelligence in anticipation of market opportunities, market dynamics, quality issues, trade events and sector-specific intelligence on commodities of interest to developing countries.

No part of these reports may be reproduced, stored in a retrieval system, or transmitted in any form or by any means without the prior permission of the MI/ITC Geneva.

Market Insider information is available free of charge to trade support institutions, enterprises and research institutions in developing and developed countries.

## Improvements to Madagascar clove production

The Ministry of Commerce and Consumer Affairs with the Association of Clove Exporters of Madagascar (GEGM) has given the green light to project to reorganize the sector.

The objective is to regulate the various stages of the marketing of clove and to control the quality of products. Participants in the clove business are obliged to complete the requirements for the collection and export.

These provisions are taken to "structure the sector, protect exporters, sustain the sector by increasing and regulating the production in order to have a stable price," said the spokesman GEGM.

Clove is the second agricultural export product of Madagascar, and the country ranks as the second largest producer with an estimated 12,000 tonnes per year after Indonesia, with 50,000 tonnes per year. However, "this priority sector in Madagascar faces competitiveness problems, destruction of quality, aging plantations and a lack of organization that threatens the development of the sector" said an analyst.

The industry supports over 30,000 farmers.

Early indications from the trade suggest that the new regulation and supervision from the GEGM is helping to improve quality and market conditions. However, by late December 20 containers of clove were blocked at port by the failure to issue export permits. Apparently, the required export standards were not being met.

## Spice parks in India

The New India Express reports that the Indian Spices Board plans to set up spice parks and quality testing laboratories in the states of Arunachal Pradesh and Meghalaya to tap the potential of North East Indian region for spice production.

At present around 60,000 hectare in this part of the country is under spice cultivation and major spices available are King Chilly (Nagaland), Lakadong turmeric (Meghalaya), ginger, garlic, black pepper and large cardamom (Sikkim and Assam).

Logistics and transportation are the major challenges faced by the region on its path to become a major player in the spice export market in the country.

The Spices Board will soon set up a centre of excellence in large cardamom research, common facility centre, training centre and quality testing lab in 25 acres of land in Arunachal Pradesh and a spice park and testing lab will be established in Meghalaya in 15 acres, to promote spice cultivation.

The Board also plans to set up cardamom auction centres in Namsai and Kimin in Arunachal Pradesh. Study tours to farmers to South India to demonstrate primary processing of spices will also be organized.

"The efforts of the Spices Board to promote spice production in the North East is a welcome change. But the lack of proper logistics facilities is a major challenge for collection of these spices. In the future companies are likely to set up procurement and storage facilities in that part of the country," said Sanjaya Mariwala, Managing Director, Kancor Ingredients.

The Spices Board has set an export target of 755,000 tonnes valued at USD2,000 million for the financial year 2014-15.

Meanwhile, more recently and further south, The Hindu newspaper reports that the Spices Board has given its technical agreement for the establishment of a turmeric park in Nizamabad district, Telangana State.

Many farmers believe that if the park cum processing unit comes into existence, it would resolve their difficulties as it will ensure reasonable, remunerative prices and avoid the risks of transport to distant markets such as Sangli in Maharashtra for a better price. With an online trading facility to be available in the turmeric park, trading of produce could be possible from all over the world.

Farmers currently grow the crop and process it in a traditional manner at a high cost. The proposed park is expected to bring modern technical methods to process the crop which saves time and unnecessary costs to farmers.

Farmers would also get expert advice for growing better quality crop. The park would also provide some employment in an area where there is currently no manufacturing.

## Subsidies for organic spices in India

The Department of Agriculture and Cooperation of the Government of India implements two schemes to promote organic agriculture, writes the Business Standard. These are the Mission for Integrated Development of Horticulture (MIDH) and the National Mission for Sustainable Agriculture (NMSA).

Under the MIDH, financial assistance is provided for horticulture crops, including spices :-

- For the adoption of organic farming - 50% of cost limited to INR10,000 per ha (about USD162/ha) for a maximum area of 4 ha in three instalments.
- For organic certification - INR5 lakhs (about USD8110) for a cluster of 50 ha. in three installments.
- For establishment of vermicompost units - 50% of the actual cost of INR1 lakh (about USD 1622) per unit for permanent structure and 50% of the actual cost of INR16,000 (about USD260)per unit for high density poly ethylene vermibed.

Under NMSA, assistance is extended for soil health management, compost production units etc.

The National Bank for Agriculture and Rural Development provides a subsidy for the adoption of organic farming. This is oriented towards clusters and villages.

Finally, the Indian Spices Board is promoting the cultivation and export of organic spices from India with special emphasis on organic production of spices in North Eastern States. The Spices Board provides 50% subsidy for various programs such as support for vermicompost units, establishment of bio-agent production units, organic seed banks (production of organic planting materials/nurseries), organic value addition/processing unit, organic farm certification assistance. Further, a 12.5% of cost of production subsidy, subject to the maximum of INR12,500 per ha (about USD203/ha), is provided for organic cultivation of ginger, turmeric, chillies, seed spices and herbal spices.

## Indian Government approves the formation of a Saffron Production and Export development Agency (SPEDA).

As 2014 closed, the Government of India approved the setting up of Saffron Production and Export Development Agency (SPEDA). The objective of the new specialized agency of the Spices Board India, is to plan and implement programs for the development and promotion of the export of quality

saffron. SPEDA is to be headquartered at Srinagar, in the northwestern state of Jammu and Kashmir, and the State Government will consult with the Spice Board in setting up the agency.

SPEDA will handle research on the production, rejuvenation and processing of saffron. The agency will also provide training to farmers as well as assuring quality control of saffron and developing a Kashmir brand.

The formation of the agency follows the commencement earlier last year of a Saffron Park Project at Pampore Pulwama in J&K State. The saffron park is being developed by the National Horticulture Board, Ministry of Agriculture of the Government of India under the National Saffron Mission at a cost of Rs 24.54 crores.

At the ceremony to lay the foundation stone of the park in August 2014 the Union Agriculture Minister expressed concern over the reports that area under Saffron cultivation in Kashmir declined from about 5,707 hectares in 1996 to just 3,875 hectares in 2010-11.

In the last few years the Minister observed that productivity fell from 3.13 kg/hectares to 2.47 kg/hectares. He mentioned that a large number of Saffron fields had become aged and were suffering from fungal diseases.

## Market Dynamics

**Pepper** – Following the highest dollar prices ever seen quiet trading conditions persisted into the end-of-year holidays. There was little left on offer from Vietnam and market eyes are on the new crop, though with the Tet holiday falling mid-February, which will restrain the full flow of early arrivals, there is some time to go yet before new supplies accumulate. India is looking to a good crop ahead.

\*\* unofficial source

**Coriander** – prices drifting off following the highs of September. The 2014 crop was bought early leaving low stock levels but also reduced demand. Indian output in 2015 is expected to be higher than 2014.

**Cumin** – reduced availability of good quality supplies of cumin from Syria are reported.

**Cloves** – Some easing as the Madagascan crop gets underway.

**Chillies** – The Indian market is moving out of the off-season quiet period. Local prices drifted off in the final weeks of 2014. New crop should start arriving in the markets of Andhra Pradesh and Karnataka from the middle of the month. Local traders are somewhat despondent about prospects in Madhya Pradesh where unseasonal rain has impacted the crop.
