## Passionate individuals who are seeking of excellence in every aspect of software delivery

A person is working on a laptop. A hand is holding a pen over the keyboard. A coffee cup and a pair of glasses are on the desk. The background is a blurred office setting.

Panaceata brings internet-age digital technologies into the needs of digital transformation and combines them with the gold-standard practices of Predictive Development and Maintenance.

We create digital platforms which enable industries to proceed with continuous innovation and to make the necessary disruption in a cost-efficient and scalable predictive maintenance strategies that reduce environmental impact, energy usage, and operational costs.

We teamed up experts in Machine Learning, Cloud Computing, Mobile Development, edge computing and data security– in order to create the digital transformation journey that our client wants to walk in.

# We would like to be a Partner of the Client's Digital Transformation Journey

## Digital Transformation Services

### DIGITAL STRATEGY

- User Experience Design
- Front-end engineering
- Technology selection
- Digital Strategy Development

### CUSTOMER EXPERIENCE

- E-Commerce
- Virtual Reality
- Augmented Reality
- Gamification

### COGNITIVE SERVICES

- Big data analytics
- NLP -Natural language processing
- Business intelligence
- Predictive Analysis

### MOBILE + IoT

- Cross-Platform Mobile Apps
- IoT + embedded Platforms
- Edge Computing
- Mobile First Design
- Mobile QA + automation

### CLOUD SERVICES

- Cloud assessment
- Cloud Architecture
- Cloud migration
- Cloud integration

### CONNECTED FACTORY

- Process Optimization
- RPA – Remote Process Automation
- Connected Systems
- Platform Orchestration

# Panaceata DRIL will bring the digital transformation to your fingerprints

**D**isruptive

**We transform traditional business** with digital enhanced assets and processes. .

**R**espect

- Single Point of contact for Dealers and Distributors
- End to end integration with backend systems which provide required value stream for dealers and distributors
- Build a source repository for Distributors which can be used for analytics to improve business outcomes.
- Smoothly transformed the business from siloed unsupported web portal to tightly integrated full fledge portal .

*“ Transform from legacy application to Mobile first design using Angular 5.0 hosted in Azure cloud with zero downtime.”*

# Electronic Voucher Distributor (EVD)

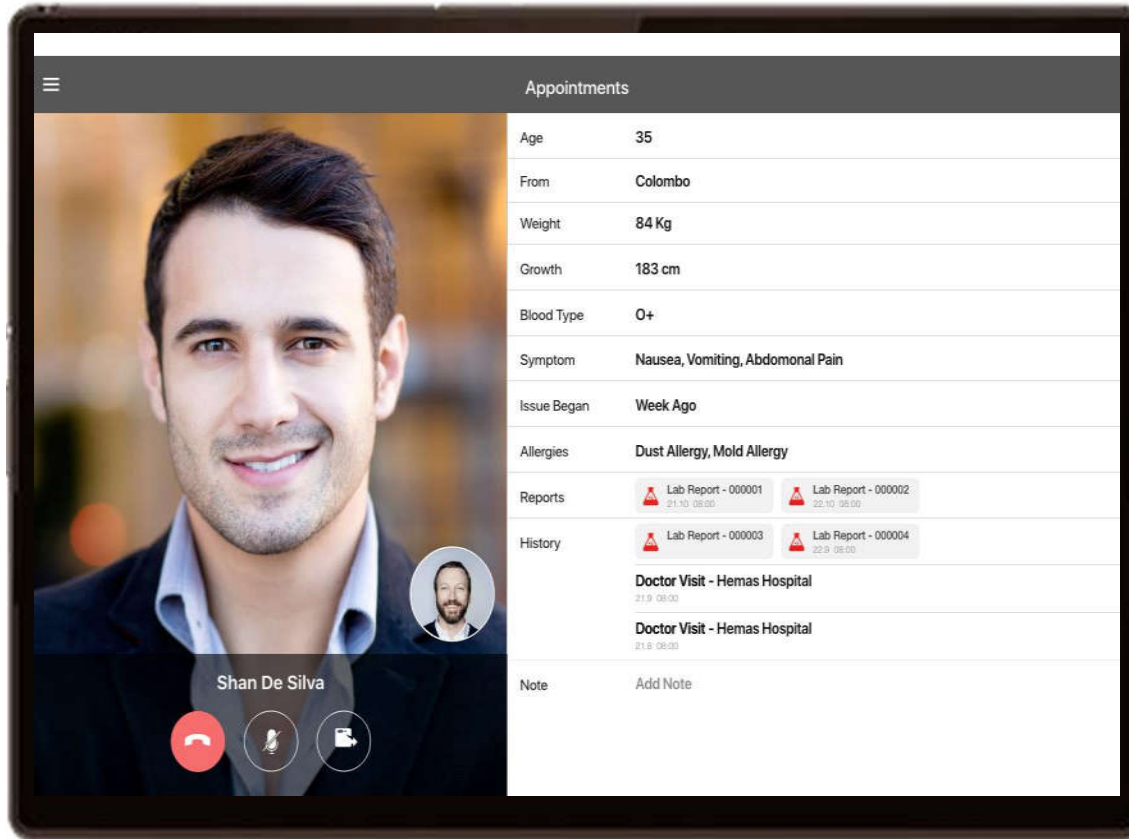

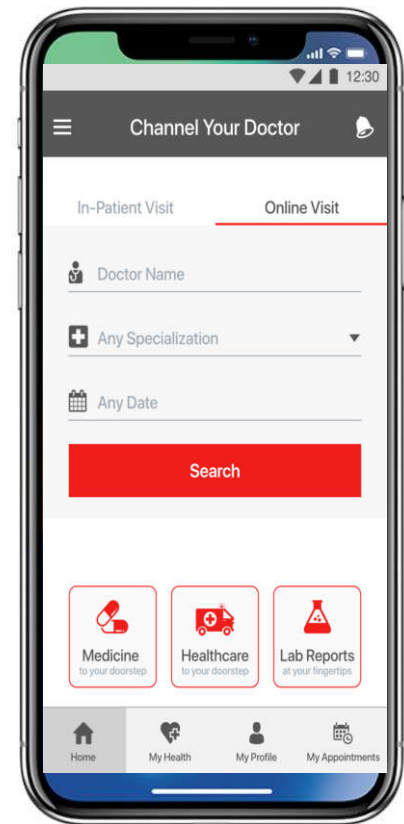

- Develop a connected system for billing solutions for field officers and agents.
- Target audience will have very basic IT literacy and most of them will be in the field.
- Solution should be in a single platform and Handheld.

*“Native application to a Handheld Device which provides printing and many other capabilities to transform Field Officer service accessories to one single device ”*

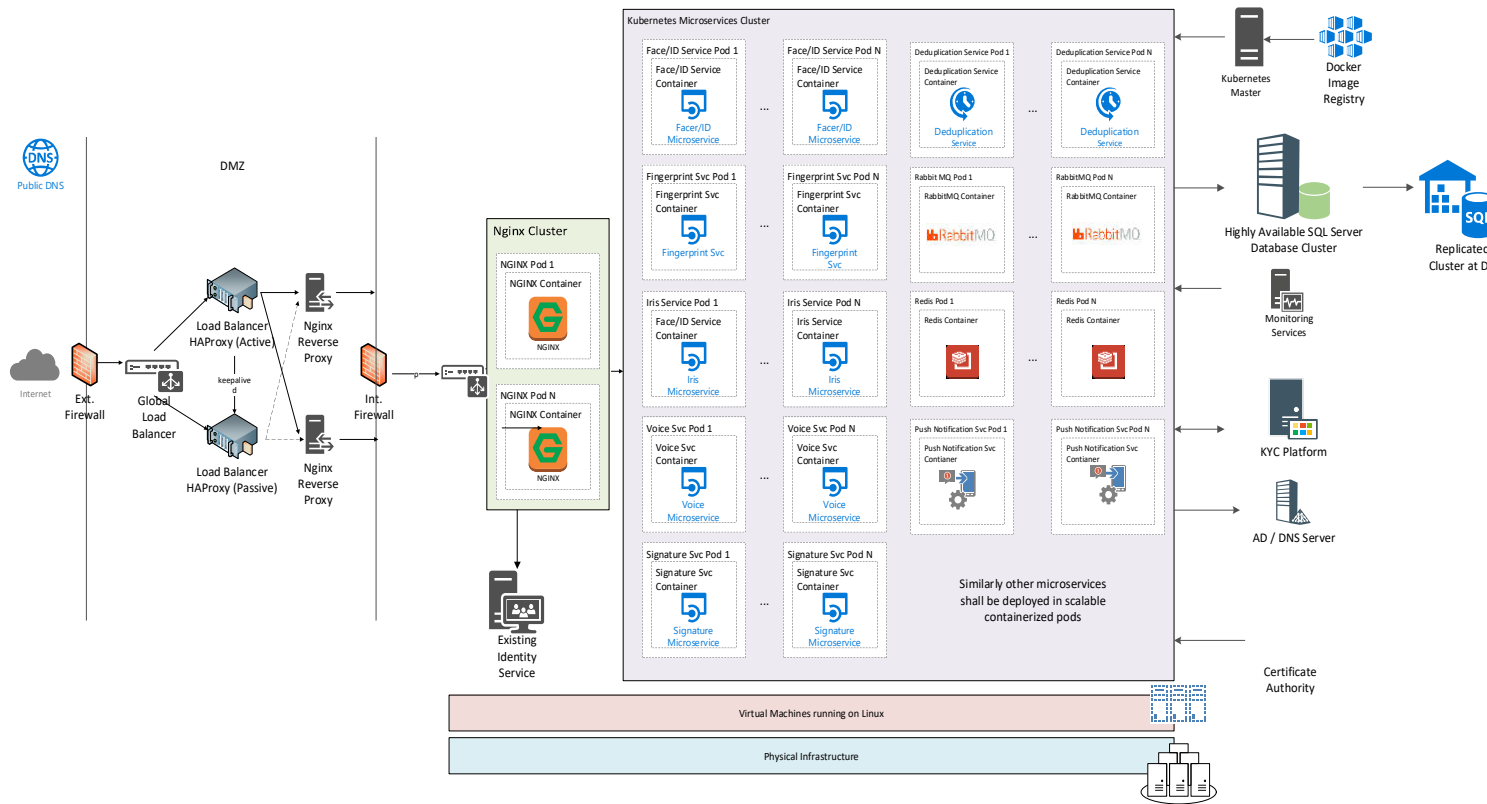

# Telemedicine Platform

- The client is looking for an off-the-shelf product on Telemedicine which can be easily integrated into their digital health ecosystem.
- The solution should be capable of handling unique problems such as device variations, bandwidth limitations, and IT literacy such as app installation.

*“Telemedicine solution with dynamic adaptive streaming and automated switching between video conferencing and audio call only solve the customer adaptability and bandwidth issues.”*

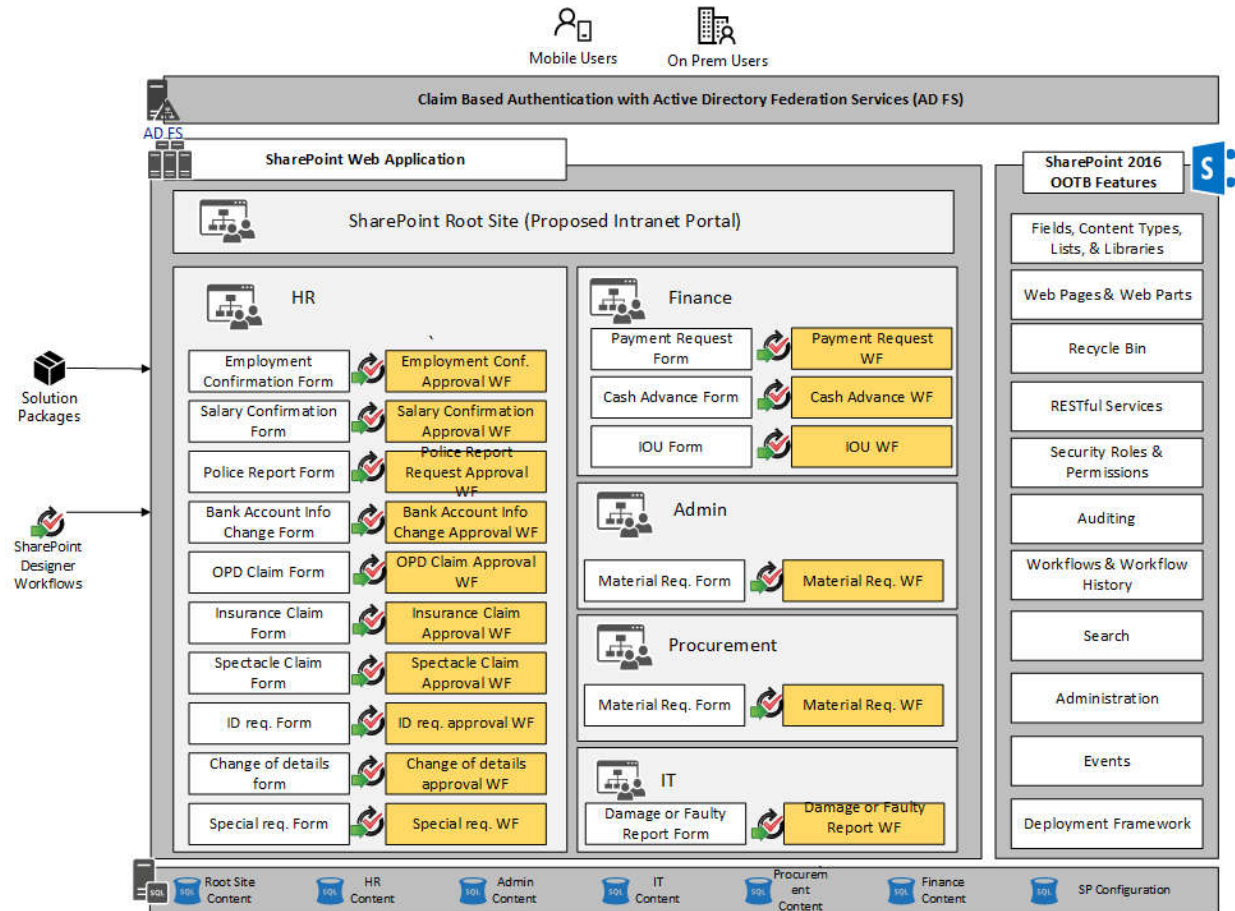

# Bio-Metric capturing Platform as a Service

- Capture the user’s biometric data and use the captured biometric data for user verification during subsequent user interactions.
- A database is to be maintained to store and retrieve the Biometric data of a new or existing customer.
- Captured biometric data to be mapped with the KYC data captured and stored by the client from their existing legacy systems.
- Define what is the “best” form of biometrics for their applications?.

*“key to success is to offer choice to your customers. Let them decide if they prefer face, voice or fingerprint authentication. This will reduce the failure to enroll, improve usability and provide a better experience for the users”*

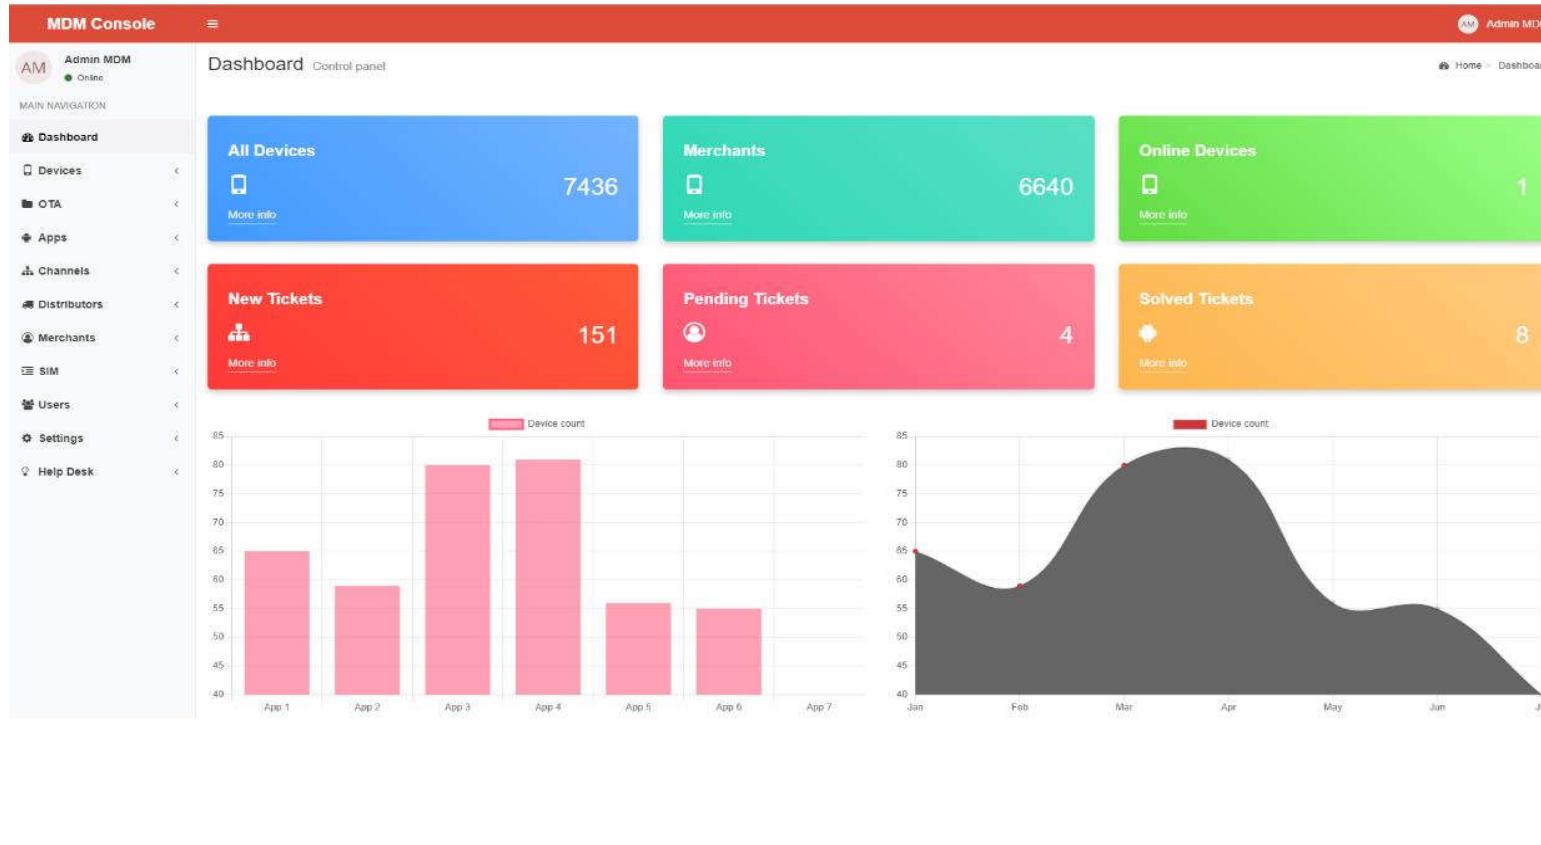

# HR Portal for Case Management and Tracking

- Develop a single case management portal for HR activities.
- Process improvements and define SLAs using workflows.
- Provide document repository and search capability to retrieve past case management.
- Mobily friendly interfaces for field officers

*“Configuring a SharePoint 2016 solution with Search, Form Development and Workflows with Minimal customization provided the required solution in a quick time interval.”*

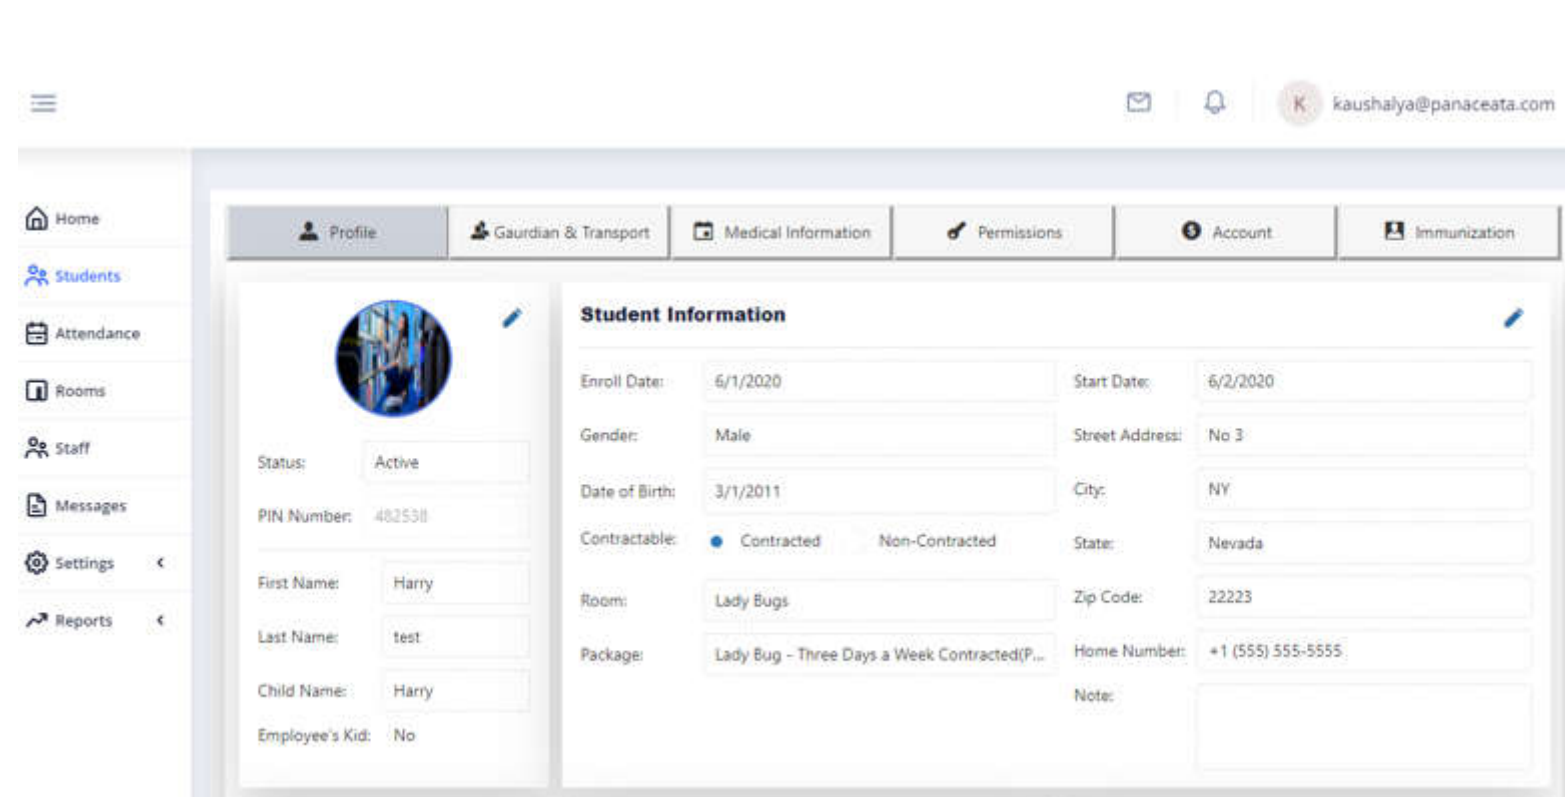

# Mobile Device Management System

- Develop an admin portal to manage distributed mobile devices from a centralized place.
- Firmware updates, mobile app updates can be pushed instantly
- Monitoring of the connectivity, GPS location, battery status, and many parameters
- A support ticketing platform is embedded in the solution
- Mobile-friendly interfaces for field officers

*“High availability environment in Azure cloud to manage more than a thousand mobile devices distributed all around the country.”*

# Daycare Management System

- Develop a platform to monitor the kids of a Daycare school
- Parents should be able to check In & check out the kids
- Invoices should be generated based on the attendance
- Tracking of Allergies, Immunization, Medical information
- Mobile app for parents to view kids activities

*“Child caring application for USA based client, Hosted in AWS”*
