

# SOFTWARE DEVELOPMENT SOLUTIONS

# A PARTNER YOU CAN TRUST

Established in 1979, ZILLIONe has over 35 years of experience in providing custom-made solutions that have helped a multitude of dynamic business organizations to propel their businesses to greater heights. Understanding the fact that one solution can't fit every other need out there in the market, our in-house ISO certified Software Development Team develops end-to-end solutions to cater to a versatile range of companies, from small start-up organizations to large multi-nationals by leveraging work-efficiency in the most cost-effective way.

## OUR APPROACH

With customized solutions across verticals like finance, trading, apparel, manufacturing, tea exports, telecom and more, we have exceeded the expectations of over 400 clients across 10 countries since inception. With a long-stretching list of clients in diverse market segments, our reputation in dealing with companies of different sizes from different countries has set us apart. Capable of handling large scale software development projects, we extend our services by offering software that help you to stay ahead of competition in today's challenging, ever-changing world.

## OUR SOLUTIONS

### BESPOKE SOLUTIONS

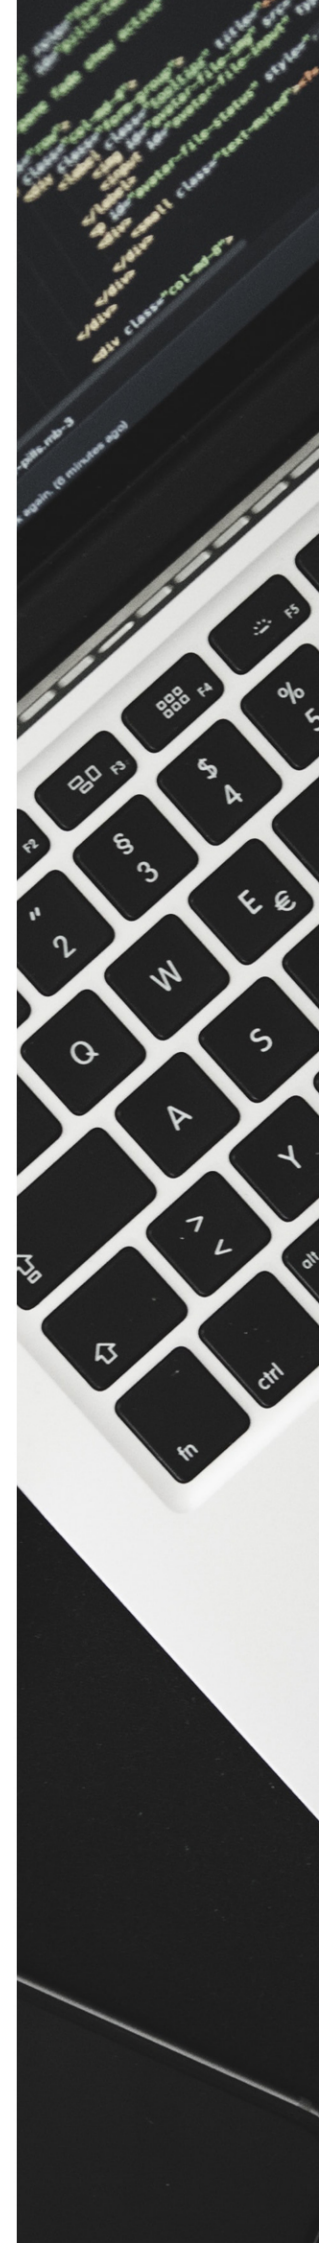

Our strength is in designing tailor-made solutions with standard platforms & technologies to cater to your precise versatile requirements of each industry and adapt to the growth of your business.

### INTEGRATIONS

Solution integration with other applications to synchronize your diverse systems in to one unique solution.

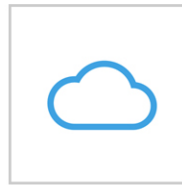

### MOBILE APPS

Offering end-to-end mobile application development services leveraging the latest technology.

# OUR TECHNOLOGY AND METHODOLOGY

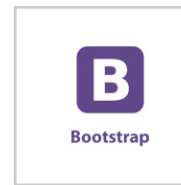

## PLATFORMS

## TECHNOLOGIES

## OUR TEAM

Our software development team consists of qualified software engineers who are rich in industrial knowledge and state-of-the-art technology. Thus their award winning software solutions have become the industry benchmarks for quality.

Our special skills add value to our customers by integrating different independent systems, bridging gaps and establishing missing links in the existing systems without completely replacing them.
