LINEARSIX

Product Development Services

LinearSix was founded in 2017 by a group of technology professionals with extensive experience in the financial services industry to help banks digitise and transform their business with best in class next generation technology and business processes. We believe that, instead of disrupting and displacing banks, technology such as machine learning, natural language programming, big data, cloud, distributed ledgers, open APIs and biometrics will help banks be better.

After helping many banks and finance companies transform, we're ready to help the most forward thinking Fintech's to ideate, develop and launch their projects to help the world in financial wellness. Our expertise are based in the tropical island Sri Lanka and possess decades of experience involving mission critical business applications for the London Stock Exchange Group, Infosys, American Express and Google.

We look forward to working with likeminded people to make the world a better place through financial wellness.

Mario Gooneratne
Chief Executive Officer

Our core expertise are in banking and software engineering. Our passion is to help our clients build and launch next generation software product in the Fintech space

Services

We're a team of Fintech enthusiasts, former bankers, software engineers and product managers who can help you make your idea into a Minimum Viable Product (MVP) and help you with expanding your MVP to become production ready.

Our core team of technology experts, banking domain experts and product managers have a collective experience of over 150 Man years in conceptualizing, building, modernizing, and operating cutting-edge Fintech products for banks, finance companies, regulators, software product companies and Fintech's.

01 One team all the way

02 Translating experience into action

03 Picking the right software architecture fit

04 Helping you see the big picture

Services

One team all the way

You need a team that can help you with each aspect of the product or platform. We empower you with banking and financial services domain experts to build for industry standards, architects to build for innovation and agility, and engineers to put everything into practice with the latest technology.

Services

Translating experience into action

Every customer engagement teaches us something new. It could be about architecture, user experience, or even compliance. We take each learning experience to add value to the next customer. Plus, we act fast - in understanding the problem and developing a solution.

Services

Picking the right software architecture fit

The world is moving into mobile and your customers are not an exception. With years of experience in developing mobile applications, we can transform your idea into a market winning mobile app. If you're looking to mobile-enable your existing platforms, speak to us to get started on a seamless journey that will complete your product ecosystem.

Services

Helping you see the big picture

Insights, intelligence, and innovation are our guiding principles for the requirement gathering stage. We turn our industry and customer knowledge into actionable business and technology intelligence to deliver innovation that works for you. Tackling regulatory requirements, lean process engineering, and technology barriers are in our DNA.

Our approach

In three simple steps, we take you from product vision to product delivery.

01 A Deep Dive into Vision and Goals

This is where you tell us the what, why and who of the desired product or platform. We take this time to discuss teams, processes, and current technology. As our discussions progress, we will start to envision the ideal product and customer experiences. At the end of the workshop, a detailed scope document is presented for review and approval.

02 Proof of Concept in Four Week

The PoC will consider all project KPIs and ensure they align with your corporate vision. It will also detail the CI/CD process for development and production. Our teams ensure that every process is streamlined through the use of tools like Jira, automated deployments from test to production environments and a reliable, and fast method of CAB approval.

03 Continuous Improvement in Sprints

This is where we get in high gear! Once we get the green light for the MVP and PoC, we work on the product roadmap with incremental milestones so the project team and customer team can regularly check in on progress. The number of sprints, be it three or thirty, don't matter to us – What we strive for is to deliver the ideal platform for you and your customers.

Why do customers trust our approach?

Agile

Promote deployments across environments without a build

Automated Dev and QA Deployments

Secure

Container security scanning

Code level security

Compliance with regulatory security standards

Reliable

A Minimum 70% test coverage

Automated code quality checks

Some of our Banking & Finance customers

Some of the technology stacks we're experts with

Some of the most cutting-edge solutions that we've built and delivered for our clients

Telco conglomerate

We built a cloud native, high performance enterprise content management and customer onboarding solution leveraging AWS Lamda for the largest telecommunications conglomerate in Sri Lanka.

The solution onboards their TV, Mobile, Data and Fintech customers.

Central Bank of Sri Lanka

Built a decentralised shared KYC platform on blockchain for the Central Bank of Sri Lanka as a POC.

The solution was built on R3's Corda enterprise blockchain platform.

Fintech product

Built a Next generation digital core to transform financial institutes into Fintech's.

The product was built on a cloud agnostic micro services based architecture.

Get in touch with us for more information about the above projects.
