## FILLING MATERIALS

**FILLING MATERIALS USED IN THE BRUSH CONSTRUCTION** - The company makes use of a wide variety of Filling materials in manufacturing brushes and brooms. They mainly fall into two categories, namely vegetable fibres & synthetic fibres. Depending on the suitability for the application the company also uses mixture of these fibres in brush construction.

### VEGETABLE FIBRES - Vegetable bres are obtained from naturally grown plants

**NATURAL COCO FIBRE (COIR)** - Coir fibre is obtained from the outer layer (husk) of the fruit of Coconut tree grown in Sri Lnaka. Coco fibre is inexpensive and has average wearing and sweeping properties and is liable to crush and distort, and is used mainly in the cheaper household and industrial brooms.

**BLACK COCO FIBRE (DYED COCO)** - Black dyed coco is obtained by dyeing natural coco has exactly the same properties as natural coco, but is more expensive.

FLAGGED BLACK FIBRE is specially treated dyed coco fibre where the ends have been flagged or split. It sweeps better than plain coco fibre, especially in drier dusty conditions, looks much more attractive and has a softer feel.

**PALMYRA (BASSINE)** - Palmyra is taken from stalks of the Palmyra palm in Southern India. The Palmyra is in expensive and durable, and its sweeping qualities are fair, but it is not resilient and may distort good resistance to heat and most chemicals. It is mainly used in warehouse brooms, in mixture for scrubbing brushes and in household brushes and brooms.

**ARENKA (GUMATI)** - Arenga fibre is harvested from the Arenga Pinnata Palm in Indonesia. Arenga is softer and finer than Bahia Paissava. However, wearing and sweeping qualities are similar to Bahia Piassava. It does not crush easily or rot, and is very hard wearing and resilient. Brushes made using Arenga are excellent for Sweeping dry concrete and smooth floors.

**TAMPICO FIBRE** - This is a leaf fibre obtained from lecheguilla plant which grows in Mexico. this material has good wearing and reasonable sweeping qualities, but is liable to crush. it is also very water absorbent, and non-electrostatic, so that the brushes remain dust free.

**SYNTHETIC MONOFILAMENTS** - Synthetic Mono filaments are made by humans and therefore artificial in nature. But these have variety of properties.

**POLYPROPYLENE (PPN)** - PPN is very light and has good wearing properties. However, it is a little “dead” in use and has poor recovery from crushing. It has a reasonably high temperature resistance and a good resistance to acids. It is used in many bass and platform brooms and household brushes. Brushes made using PPN can be used in hot water.

**POLYVINYL CHLORIDE (PVC)** - has excellent wearing and sweeping properties, but has a tendency to “flick” in use. It can be used in a similar manner to Polypropylene, but should never be used in temperatures greater than 65°C.

**FLAGGED PVC/PPN FIBRE** - ends of the fibres are split and therefore enables smooth cleaning

Economical brush range for general purpose hand cleaning jobs. Ideal for use in home, workshop, office, garden and car.
