About us

Our humble beginning started trying to protect our own kids from Dengue. We try to find repellent that work effectively and safe to use regularly on kids. Unfortunately majority of imported brands that worked had harmful chemical substances such as DEET, and most local repellents not work effectively.

Hence we started experimenting our own remedies with guidance of indigenous doctor whom help us to develop amazing formulations that worked effectively and long-lasting much more than other available repellents.

After testing among our friends and families for years, we thought of sharing these remarkable products globally to keep kids and families safe.

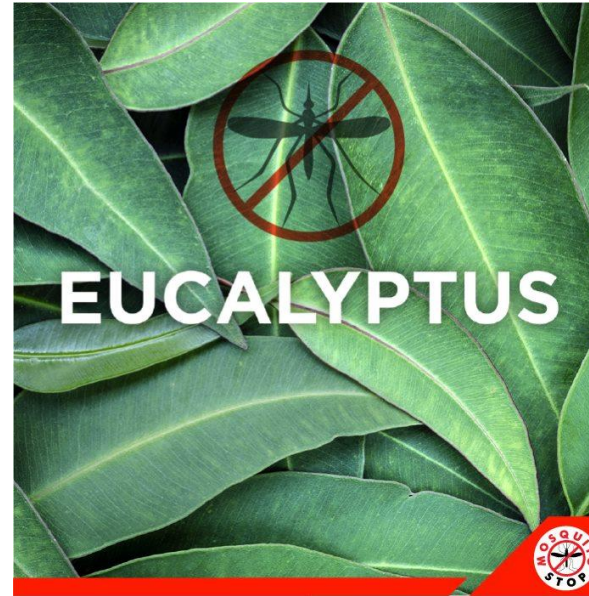

What we use in our products

We all know that Citronella grass is renowned for its anti-mosquito properties. However, did you know that Sri Lanka got the world best Citronella? Get the right citronella as geraniums are sold as Citronella. The true Citronella is in grass form.

Clove is a main ingredient in our Mosquito Repellents! The clove tree is an evergreen that grows up to 8–12 m tall. Unlike most other spices, cloves can be grown throughout the year, and most importantly it has many health benefits.

Eucalyptus is a main ingredient in our Mosquito Repellents! Eucalyptus, from the myrtle family is the tallest known flowering plant on Earth! An evergreen tree native to Australia, the essential oils extracted from eucalyptus leaves also have powerful medicinal properties.

Indigenous to Sri Lanka, Cinnamon is a powerhouse packed with amazing properties, and one of them is to be pungent to mosquitoes!
